New Color

Hello and welcome back to the Northstar Newsletter. We hope everyone has had a good start to their New Year. Here at Northstar we have been busy working on our newest color NS-91 Ninja.

NS-91 Ninja is the newest color to be added to our color pallet. It's a very soft and smooth navy blue - based black (as opposed to NS-33 Turbo Cobalt's brighter cobalt blue shade.) One benefit of Ninja is it's tendency to not over reduce or turn gray like Turbo sometimes can.

Ninja should be worked in a neutral to oxidizing flame. It works well in both encased and unencased applications. The working properties of Ninja are very similar to those of NS-76 Onyx. NS-91 Ninja works well for all applications, especially tubing and solid work.

Ninja is a great replacement for NS-16 Black and NS-35 Black Hole, which we are no longer producing due to their hazardous raw chemical make up.

The marbles in these photos demonstrate the intense black of NS-91 Ninja, and the nice contrast to brighter colors such as NS-54 Star White.

We hope Ninja can give your work a new kick!

See reverse side for more Northstar News.

White Reticello
with Raked Backside
Colors: NS-54 Star White,
NS-91 Ninja, NS-49 Dark
Blue Amber Purple and
NS-86 Garnet.

NS-91 Ninja is a nice, soft, smooth Black color. When thinned, you get a transparent dark blue shade. Ninja is very easy to work with. This color is great for tubing and solid work. It works well unencased and encased. It is best to use a neutral to oxidizing flame when working unencased.
